Chat App Workflow (Powered by Sera AI)

1. User Account Management

- User Login / Create New Account:
- Users can log in with their existing account or create a new one through a sign-up process.
- After logging in or signing up, the user is authenticated within the app.
- LinkedIn Integration:
- Users are prompted to verify the application with LinkedIn. This verification allows access to LinkedIn API functionalities.
- Once authenticated with LinkedIn, the user can proceed to use LinkedIn-related features within the chat.

2. Chat Modes

- Mode 1: Basic Chat
  - User can start chatting with the AI (Sera AI) immediately.
  - No advanced search features are available in this mode.
- Mode 2: Advanced Chat
  - Includes functionalities such as:
    - Summarization of content.
    - Latest information gathering from custom search sources.
    - Data processing with NLP capabilities.
  - Advanced search capabilities, leveraging real-time data retrieval and processing from specified sources.

3. LinkedIn Features Integration

- @linkedin-create-post:
  - Users can create LinkedIn posts directly by typing this command in the chat interface.
  - The bot will prompt for post content or link to be shared on LinkedIn.
- @linkedin-myinfo:
  - Automatically retrieves the user's LinkedIn profile information (such as name, job title, profile pic , country and bio) using the LinkedIn API.
- @linkedin-userinfo:
  - Provides search results for up to 10 LinkedIn profiles based on the inputted username.
  - Displays detailed information such as the user's name, job title, and current employer.
- @linkedin-topic:
  - Retrieves the top 10 article posts related to the user-entered keyword or topic from LinkedIn.

- @linkedin-role:
  - Returns information about individuals employed in a specified company at a particular position, e.g., "HR at Google."

- **Create Post or Article with Link:**

  - Users can directly create a post or an article on LinkedIn by providing a link and using the relevant commands in the chat interface.
  - The Sera AI bot facilitates this process by guiding the user through the content
